Abstract: The construction of research universities is an important content of advanced education reform in new epoch, while undergraduate education always is the foundation of advanced education. Based on the experiences in our specialty construction, we made use of all kinds of available resources, carried out a series of teaching reform and established effective the model of fostering students. Which embodied the unification of teaching and researching, the unification of theory and practice, the unification of realism and innovation, in each stage of the model of forstoring students.

Key words: civil engineering; the model of fostering students; specialty construction
